TECHNICAL FEATURES

WETSUIT NEOPRENE

ULTRALIGHT

Super light neoprene for added warmth and flexibility. Improved insulation.

4-WAY STRETCH

Highly flexible neoprene. Improves movement.

WETSUIT LINING

QUICK DRYING

Allows for a quicker drying time.

WETSUIT CONSTRUCTION

GLUED & BLIND STITCHED

Strong, durable and watertight construction.

FLATLOCKED

Flat and comfortable.

A blind stitch uses curved needles and penetrates the neoprene only partway through. Since the holes are only partial, this stitch provides the best cold water protection and is the industry standard. Most blind stitches are reinforced with tape and/ or glue for extra durability and water protection.

A more durable stitch used in most summer wetsuits. Triple needles penetrate and bind layers of neoprene together providing a strong but flat stitch for comfort and strength. Not as watertight as blind stitching but very hardwearing.

LIQUID TAPE

100% waterproof. Seams are sealed with liquid rubber.

FOCUSED NEO TAPING

Flexible spot taping in strategic areas for extra strength.

MESH SKIN

Chest and back panels. Increases the warmth of the suit and helps to reduce wind-chill.

NEO TAPING

Flexible taping along seams for added strength. Limits water penetration and increases warmth.

DOUBLE DIAMOND

Durable, double knit nylon fabric protects high-wear areas.

WETSUIT ENTRY

FRONT ZIP

Front entry system. YKK zip.

BACK ZIP

Back entry system. YKK zip.

WETSUIT THICKNESS

The neoprene used in Sola wetsuits varies in thickness. Measured in millimeters as indicated by these icons. The basic rule is, the colder the water the thicker the neoprene.
